Reference:

Key Words:

Chinese, culturally appropriate tools, breast cancer, cancer screening

Research aim:

This paper is a report of the development and psychometric testing of the Chinese Breast Cancer Screening Beliefs Questionnaire, a culturally sensitive questionnaire for measuring Chinese-Australian women's beliefs, knowledge and attitudes towards breast cancer and breast screening practices.

Results/Conclusion:

Preliminary data suggest that the Chinese Breast Cancer Screening Beliefs Questionnaire is a valid, reliable and culturally sensitive instrument for the measurement of Chinese-Australian women's beliefs, knowledge and attitudes about breast cancer and breast cancer screening.

Implications:

Cultural Group(s):

Chinese

Location of study:

New South Wales (Sydney)

Age group:

22-78

Number included in study:

292

Type of participants:

Chinese women resident in Australia

Research approach:

Quantitative

Type of data:

Primary

Secondary data sources used:

Specific scales or analytical techniques used:

Implications/ Recommendations:
