

Support Group for Latino Caregivers of Dementia Elders: Cultural Humility and Cultural Competence

Author/s: Reynoso-Vallejo, Humberto | **Year:** 2009 | **Publication type:** Journal article | **Peer reviewed:** | **Topic area/s:** Carers who are CALD, Dementia

Reference:

Key Words:

International study, CALD carers, dementia, radio, Latino, support groups

Research aim:

This study reports on an intervention for Latino caregivers of elders with Alzheimer's disease through the development of a support group on the radio.

Results/Conclusion:

This model of intervention, the radio support group, showed that innovation simultaneously with cultural humility approaches is promising. Overall, caregivers found this information useful, suggesting the need for more cultural humility type of interventions. Cultural humility approaches and a set of culturally relevant services are needed for Latino caregivers and family members to address their needs and help overcome some of the challenges that individuals and families affected by Alzheimer's disease experience.

Implications:

Cultural Group(s):

Latino

Location of study:

United States (Boston)

Age group:

Number included in study:

N/A

Type of participants:

participants in a longitudinal study and participants in an intervention group

Research approach:

Mixed methods

Type of data:

Mixed

Secondary data sources used:

Specific scales or analytical techniques used:

Implications/ Recommendations:
